

Lunchbox Talk

The Amazon as a Planetary Keystone

Dr Thomas Lovejoy

Thomas is a conservation biologist who has worked in the Brazilian Amazon since 1965 and made the fate of tropical forests a public issue. He was Chief Biodiversity Adviser to the President of the World Bank and Senior Adviser to the President of the United Nations Foundation before becoming Biodiversity Chair of the Heinz Center for Science, Economics and the Environment.

He introduced the term “biological diversity” to the scientific community in 1980. He received his B.S. and Ph.D. in biology from Yale University and is currently University Professor of Environmental Science and Public Policy at George Mason University.

Wednesday 11 September | 1:00 - 2:00pm

Main Seminar Room
